

I am an expert on chimpanzees.

I studied family and social interactions of chimpanzees in the wild.

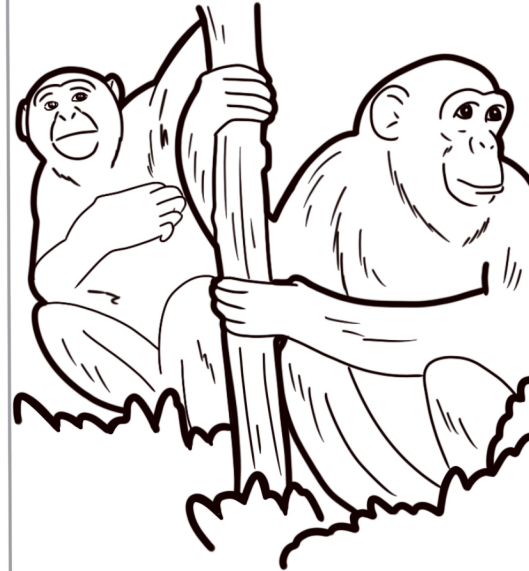

My name is Jane Goodall. I'm an English primatologist and an anthropologist.

In 1960, primatology was a male-dominated field. I was selected to study in Africa. There were still people who did not support my work.

Jane Goodall Women of History

I made discoveries that changed our understanding of primate behavior forever!

I hope my story helps young women feel confident about pursuing their dreams!
